PAVEL GOLDIN

Lead Systems & AI Infrastructure Architect | 8+ Years Experience

Location: Donetsk (Relocating to Dubai, UAE) **Phone:**+7 (925) 741-89-32 **Email:**goldiii.dev@gmail.com
Telegram:@itsbanana2 **GitHub:**github.com/Goldiii-sudo **LinkedIn:**linkedin.com/in/pavel-goldin-dev

UAE / Gulf Availability: Nationality: Russian | **Status:** Relocating to Dubai / Abu Dhabi (Immediate Visa Processing) | **Notice Period:** Immediate (0 Days) | **Relocation:** 1-2 Weeks

PROFESSIONAL SUMMARY

Hands-on **Lead Systems & AI Infrastructure Architect** with 8+ years of engineering experience delivering high-throughput distributed systems, dynamic routing meshes, and autonomous AI automation pipelines across UAE, GCC, and European client markets. Proven record architecting multi-region VPN/ZTNA data planes on Linux kernel networking and **FRRouting (FRR) / BGP**, routing **100k+ concurrent encrypted client tunnels** at **99.99% SLA** with **sub-300ms BFD failover** across regional edge PoPs. Deep production expertise in low-level systems (C/C++, x86/x64 inline detours, WinAPI/NTAPI, Policy-Based Routing), scalable web platforms (Next.js, WebGL GLSL shaders, PWA), and end-to-end autonomous agent architectures (Telethon MTProto, LLM vacancy scoring, anti-bot WAF bypass).

TECHNICAL COMPETENCIES

Systems & Low-Level:	**C, C++ (C++17/20)**, x86/x64 Assembly, WinAPI, NTAPI, Memory Analysis (AOB Signature Scanning), **MinHook / Inline Detours**, Process Injection (Manual Map, APC), PE/COFF Format, Linux Policy-Based Routing (PBR / `ip rule` / `nftables`), eBPF fundamentals
AI & Autonomous Agents:	**Python 3.11+**, **Telethon (Telegram MTProto)**, FastAPI, AsyncIO, Local LLM Inference (**GGUF, llama.cpp, vLLM**), Gemini / OpenAI / Anthropic APIs, RAG Architectures, Autonomous Outreach Agents, Stealth Web Crawlers
Dynamic Routing & ZTNA:	**FRRouting (FRR)**, **BGP (eBGP/iBGP, ECMP, BFD, route-maps, communities)**, OSPF, **WireGuard / AmneziaWG**, **XRay (VLESS/XTLS)**, IPsec / StrongSwan (IKEv2), OpenVPN, FreeRADIUS, Zero Trust Micro-segmentation
Cloud, Containers & Infra:	**Kubernetes (multi-cluster, multi-region)**, Docker, Helm, **ArgoCD (GitOps)**, Terraform, Ansible, HashiCorp Vault, Proxmox VE, Bare-metal nodes, AWS, OVHcloud, Cloudflare
Frontend & Graphics:	**React, Next.js, TypeScript**, WebGL / GLSL Shaders (procedural noise, ripple fluid dynamics), Three.js, Tailwind CSS, Progressive Web Apps (PWA), WebSockets
Observability & Storage:	Prometheus, Grafana, Alertmanager, Loki, **PostgreSQL**, **Redis** (Token Bucket rate-limiting, pub/sub), SQLite

PROFESSIONAL EXPERIENCE

Lead Systems & AI Infrastructure Architect | Evolute Technologies & AI Systems

01/2025 - Present | Remote (client: Dubai, UAE)

Key Clients: Evolute Dental Atelier (Dubai, UAE), OmniSight Vision, FinTech Networks | Stack: Python, Telethon, FastAPI, C++20, CUDA, WebGL (GLSL), Next.js, Redis, Docker

- **Evolute Dental Atelier PWA:** Engineered medical platform featuring custom procedural WebGL Aurora GLSL shader and zero-leak ripple fluid mechanics operating at locked **60 FPS** across iOS/Android mobile GPUs, integrated with autonomous AI appointment booking (dental-pwa-green.vercel.app); conducted technical discovery and client delivery in Dubai.
- **OmniSight-CV Spatial Analytics:** Developed multi-camera edge vision platform processing RTSP streams with custom C++/CUDA preprocessing kernels, TensorRT INT8 inference, and ByteTrack spatial tracking operating at **120+ FPS** with sub-millisecond tracking latency.
- **Telegram Job Hunter AI:** Architected autonomous multi-threaded pipeline monitoring 200+ Telegram channels, evaluating job requirements against candidate profiles via LLM scoring, and dispatching personalized outreach via private MTProto sessions (cut response time to **<40 seconds**, boosting lead conversion by **4.2x**).
- **Stealth Scraping & API Gateway:** Built high-throughput distributed scraper for 2GIS and Google Maps extracting **10,000+ structured merchant datasets** across UAE commercial directories without WAF blocks, paired with a FastAPI/Redis token bucket rate limiter (**<1.5ms overhead** at **10,000 RPS**).

Lead DevOps & Network Infrastructure Engineer | TechFlow Solutions

10/2023 - 12/2024 | Remote (client: Dubai, UAE)

Employer: TechFlow Solutions | Stack: FRRouting, BGP, WireGuard, Linux PBR, Kubernetes, ArgoCD, Terraform, Vault, Go, Prometheus

- **100k+ Tunnel ZTNA Data Plane:** Architected high-load multi-region VPN/ZTNA gateway infrastructure handling **100k+ active concurrent encrypted client tunnels** connecting GCC (Dubai Equinix DX1) and European PoPs with automated traffic steering, health reconciliation, and **99.99% uptime**.
- **Dynamic BGP & Sub-300ms Failover:** Engineered dynamic routing mesh utilizing **FRRouting (FRR)** with **BGP (eBGP/iBGP)**, BFD for **sub-300ms transit failover**, and ECMP multipath distribution across multiple upstream IXPs and bare-metal transit providers.
- **Linux Policy-Based Routing:** Implemented Linux **Policy-Based Routing (PBR)** with custom routing tables, fwmark packet tagging in nftables, and MTU/MSS clamping, completely eliminating tunnel fragmentation and asymmetric route leaks.
- **GitOps & Auto-Healing Daemons:** Led multi-cluster **Kubernetes** fleet operations via **ArgoCD GitOps** with zero downtime; authored custom network diagnostics and healthcheck daemons in **Go**, automating gateway reconciliation and auto-healing dead endpoints in under 5 seconds.

PROFESSIONAL EXPERIENCE (CONTINUED)

Senior Systems & Infrastructure Developer | WebCraft Studio — 06/2022 - 09/2023 | Remote (client: Dubai, UAE)

Employer: WebCraft Studio | Stack: Linux, OpenVPN, StrongSwan (IPsec), OSPF, Docker, Terraform, GitLab CI/CD, Go, Prometheus, Grafana

- Designed and operated enterprise site-to-site VPN tunnels using StrongSwan (IKEv2/IPsec) and OpenVPN with FreeRADIUS AAA authentication for distributed engineering teams across UAE and EU offices.
- Maintained internal datacenter routing with **OSPF** and configured redundant perimeter gateways on Proxmox VE and OVH bare-metal nodes.
- Constructed end-to-end GitLab CI/CD automation pipelines for Docker image builds, automated container vulnerability scanning, and infrastructure provisioning via Terraform and Ansible.
- Set up comprehensive observability stack (Prometheus, Grafana, Alertmanager, Loki), authoring real-time network latency, jitter, and packet loss telemetry dashboards.

Lead Frontend & Systems Engineer | Batumi Real Estate & CRM Logistics — 01/2020 - 05/2022 | Remote (client: Dubai, UAE)

Client Market: Dubai & Abu Dhabi, UAE | Stack: TypeScript, Angular / React, RxJS, WebSockets, Mapbox GIS, Tailwind CSS, Jest, Docker

- Architected and delivered an international real estate platform for property sales targeted at GCC and UAE cross-border investors (Dubai, Abu Dhabi, Doha) with multi-currency pricing (AED, USD, EUR), interactive GIS mapping, and URL state persistence (+28% conversion).
- Designed high-performance B2B logistics CRM dashboard with reactive state management and virtual scrolling for data grids handling **10,000+ live fleet records** (4x rendering speedup).
- Integrated real-time bidirectional WebSocket channels for instantaneous vehicle telemetry updates and cross-border route tracking.
- Optimized bundle size and Core Web Vitals, achieving a 40% reduction in initial bundle weight and decreasing page load times from 3.2s to 1.1s.

Systems Software & Low-Level Developer | Reverse Engineering & Automation Core — 09/2018 - 12/2019 | On-site (Donetsk)

Stack: C, C++, x86/x64 Assembly, WinAPI/NTAPI, MinHook, Process Memory Analysis, PE/COFF Format

- Authored high-performance memory analysis tooling: AOB (array-of-bytes) pattern scanning with wildcard masks, multi-level pointer resolution, and runtime virtual memory patchers.
- Engineered inline hook engines and VMT (virtual method table) hooking mechanisms using **MinHook** detours for dynamic API interception, behavioral tracing, and syscall auditing.
- Conducted PE/COFF format reconstruction: section header alignment, import/export directory traversal (IAT/EAT patching), and relocation mechanics for manual map DLL injection research.

EDUCATION & PROFESSIONAL CERTIFICATIONS

Bachelor of Science in Computer Science & Software Engineering - MIREA (Russian Technological University) 2016 - 2020

Certified Kubernetes Administrator (CKA) & Cloud Native Networking - The Linux Foundation, USA 2021

Rolling Scopes School (RS School) - Angular, TypeScript & Architecture (Top 10% Graduate Honor) - The Rolling Scopes, Poland / EU 2022

HashiCorp Certified: Vault & Terraform Associate (Infrastructure Security) - HashiCorp, USA 2023
